Sec No- 12	Team No- 11	Project Title- Multi-Vendor E-Commerce Marketplace
-------------------	--------------------	---

1. Abstract

The **Multi-Vendor E-Commerce Marketplace** is a web-based platform that allows multiple sellers to sell their products to customers through a single website. In traditional online shopping, small sellers may find it difficult to reach more customers and manage their products effectively. Customers may also need to visit different websites to compare products, prices, and reviews.

The proposed system provides a common platform where vendors can register and add their products, manage stock, view orders, and update product details. Customers can create an account, browse and search for products, compare different products, add products to the cart, place orders, and track their orders. The system also provides an admin panel to manage users, vendors, products, and orders. Customers can also give ratings and reviews for the products they purchase.

The main aim of this project is to make online shopping easier for customers and provide a simple platform for vendors to sell their products. By bringing multiple sellers and products together in one place, the system provides a convenient, organized, and efficient e-commerce experience.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520090022	K. Sriram	
2520090048	I Haricharansai	
2520090125	Hasith Varma	

3. Frameworks / Platforms / Software Used**Frontend:** React.js, Bootstrap, CSS, Axios, React Router**Backend:** Node.js, Express.js**Database:** MongoDB, MongoDB Compass**Authentication:** JWT, bcrypt.js**Testing:** Postman**Development:** Visual Studio Code**Version Control:** Git, GitHub**Guide Name and Signature (remarks if any)** _____
